

Ossiflex Bone Membrane Closes Champ's Large Palatal Defect

Champ had a large, healed palatal defect. His 97 yr old owner Walter had been taking him for sinus lavages for years before he visited Dr. Judy Yee who was easily able to close his palatal defect with Ossiflex.

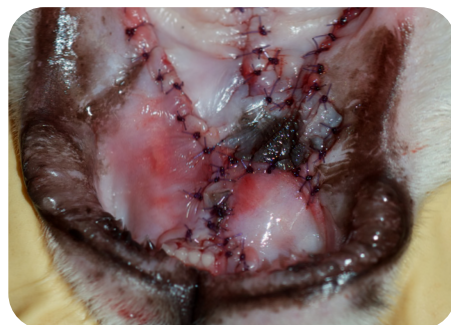

The Ossiflex covered the large opening and the mucosal layer was closed over the bone membrane. Champ healed well and gained 5 pounds!

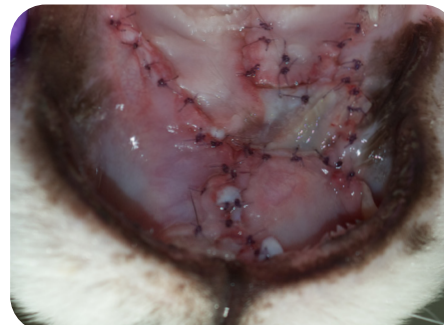

CHAMP, 8 year-old feline

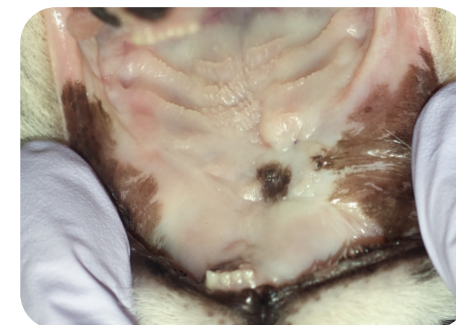

Ossiflex is a thin, flexible sheet of natural demineralized cortical bone. Used for effective closure palatal and other cranio-maxillo-facial defects.
